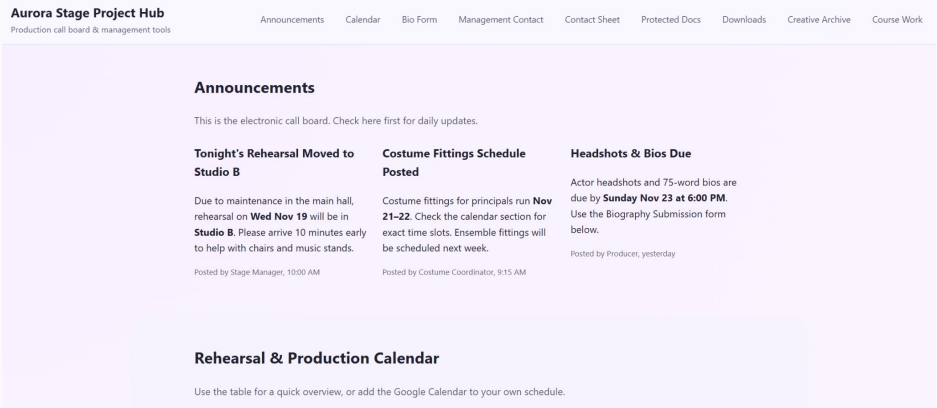
How I Built My Course Website

THEA 3135 - Technology in Arts Management
5 Minute Presentation Project
Farhan Ahmed
April 1, 2026

Website: aurorastage.netlify.app

Project Overview

- Built as a central course website
- Organizes assignments, projects, and resources
- Includes forms, downloads, protected files, and linked pages



Purpose of the Website

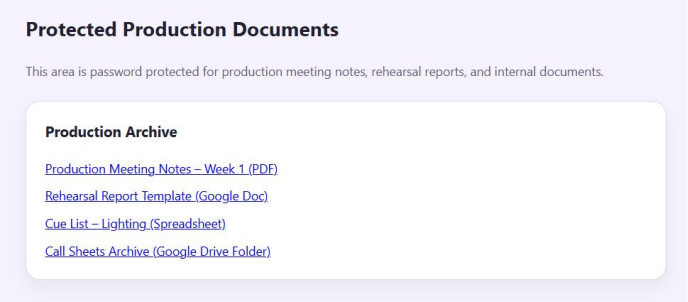
- Keep course work in one place
- Make important sections easy to access
- Organize both public and protected content
- Create a clean and usable layout

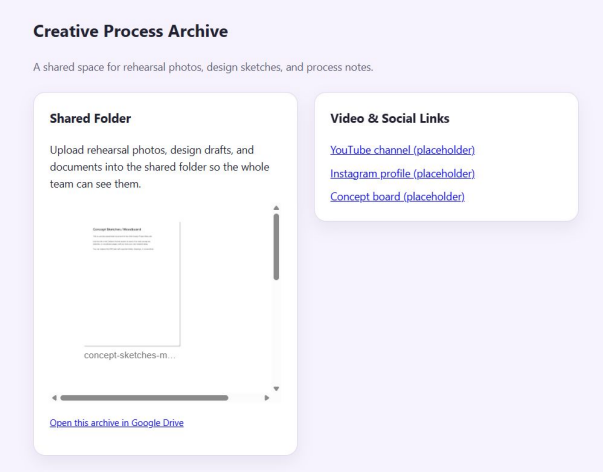
Key Features on the Homepage

- Announcements
- Calendar
- Biography submission form
- Management contact form
- Contact sheet
- Downloads and protected documents

Protected and Shared Content

- Password-protected production documents
- Google Drive links for project files
- Creative archive with shared folder embed
- Public downloads for forms





Tools I Used

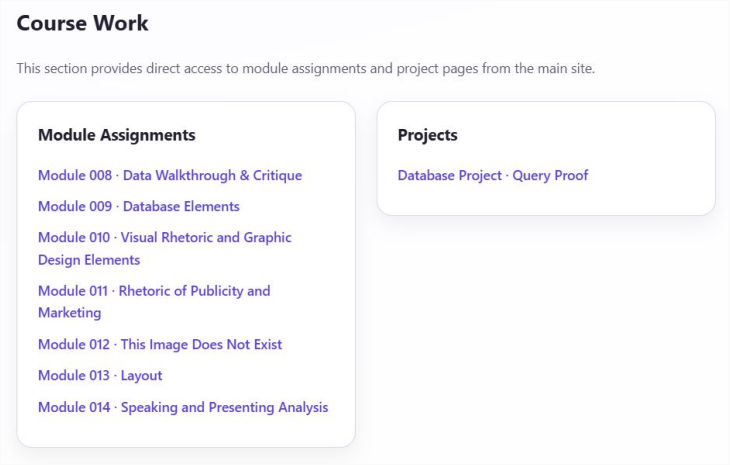
- HTML
- CSS
- JavaScript
- Google Drive
- Google Calendar
- GitHub
- Netlify

Design and Layout Choices

- Simple navigation bar
- Clear homepage sections
- Soft color palette
- Card-based layout
- Mobile-friendly design

Course Work Section

- Added direct links to module pages
- Added project page links to the homepage
- Improved navigation
- Reduced dependence on direct URLs



Challenges and What I Learned

- Organizing many sections without clutter
- Making links and embeds work properly
- Improving navigation over time
- Learned more about website structure and usability

Conclusion

- Created a functional course website
- Organized assignments, projects, and resources
- Improved the site over time
- Built a strong base for future updates
